Add Book to Cart

Add Book to Cart is a system function where it enables users to add selected books to a shopping cart while browsing the catalogue. The cart temporarily stores the chosen items, allowing users to review their selections at any time. At this point, this selection can be checked such as the titles appear alongside key information like amount and cost. This function also should shift preferences, deleting an item is possible without delay. Instead of buying immediately, people gather options first. Efficiency improves when decisions are reviewed ahead of payment steps.
